Is a type of application for which sensor networking be of significant benefit?

1) Firefighter - hazard smoke detection.
   Fire Truck.
2) Train - smoke detector
What are the key challenges?

How to achieve Global Internet Connectivity?

What are different areas of IT/CS which are involved in building such a system?

HCI – DB Information Retrieval, WS, Mobile

AI = (Decision Systems. Agents

Information Integration Data Mining)
Sensors
DB
Raw Data

Querico

Information (Aggregation)

Decisions

dynamically adaptive network
With respect to NSN value & the application.

1. What issues we have addressed in the class till now, and?

Cost vs benefit

2. What issues we have not addressed? (Or should address in the future)

Types & functionality of sensors
