

**CSE494/598 Mobile Health and Social Networking (Sp 2009)**  
**Term Project: Phase II (Refinement) Requirements**  
**Due: Tuesday, April 7, 2009**

The goal of Phase I was to select an application area and propose a new application, including its business model. This report loosely reflects to the *Elaboration* phase of the *Unified Software Development Process*. It is a refinement to the Phase I (which focuses on the application's features and perceived functionality) by providing amendments to Phase I and a plan of how the functionality will be implemented\*. This means that this report will include a high-level description of the **application's internals** (e.g. code structure, pseudocode or diagrams of significant, classes and public methods if applicable, any foundation libraries used), an **implementation plan**, an **interface prototype**, and a test plan. In addition, the report should provide answers to the following questions:

1. How has the functionality been altered? Are there any changes to the business model? What are the reasons for the changes in 1, 2?
2. What is your tentative time plan for Phase III (Completion)? How are your implementation objectives prioritized?

Submit hardcopy of the report at the beginning of the class. The report should be written in a technical style using good English. All referenced sources should be cited. In writing report take into account the feedback you got from the instructor during face-to-face meeting. Restrict your reports to maximum of 7 pages (minimum 10 point font and excluding citations).

---

\* By this time, you are assumed to have (i) installed the software platform and SDK, (ii) developed and run some non-trivial program, i.e. other than "Hello, World", and (iii) started writing code for your application.
