Caching XML Web Services:

Consistency:

Strong Consistency: due to disconnection, the client does not have access to updates from other users, so providing strong consistency is not possible.

What kind of weaker consistency to support?
Provide cache results which are consistent with a user's own actions. Weak consistency model supported by this caching scheme.

Discussion

Noah: Not practical.
Anus: Very application dependent.
Ash: Stepping stone to better disconnected computing.
Yu: Use is very limited.

Is this work generalization of CODA?
Reason: Very simplistic does not address complex business logic.

Gianni: Need a more convincing example.

Robin: Natural extension to specific web services.
