Question 1 (25 points)
Select and name a certain type of computing system (desktop, handheld, large-scale enterprise cluster etc). Make a claim and give arguments (i.e. justification) on which of the ten rules will give the most energy savings.

Question 2 (25 points)
Propose your own eleventh rule of reducing waste energy. Give a one-sentence short description of it (just like the ones in the Ranganathan’s paper), and then give one or two examples. Additionally, argue why this eleventh rule is orthogonal to the other ten.
